

ANÁLISIS EXPLORATORIO DE DATOS PCC - UNAM

SESIÓN I. INTRODUCCIÓN.

29-31.01.24

ANTONIO NEME CASTILLO

IIMAS UNAM

‘THE ERA IN WHICH THE FERMENTATION OF CANCER CELLS OR ITS IMPORTANCE COULD BE DISPUTED IS OVER, AND NO-ONE TODAY CAN DOUBT THAT WE UNDERSTAND THE ORIGIN OF CANCER CELLS ... IF WE KNOW HOW THE DAMAGED RESPIRATION AND THE EXCESSIVE FERMENTATION OF CANCER CELLS ORIGINATE.’

OTTO WARBURG (1883, 1970)

MAPA DE CATALHÜYUK (HACE 10,000 AÑOS)

“IF WE TURNED OUR BACKS ON THE AMAZING RATIONAL BEAUTY OF THE UNIVERSE WE LIVE IN, WE SHOULD INDEED DESERVE TO BE DRIVEN THEREFROM, LIKE A GUEST UNAPPRECIATIVE OF THE HOUSE INTO WHICH HE HAS BEEN RECEIVED”

ADELARDO DE BATH (1080 - 1152)

(HOLBEIN, 1553. *Los EMBAJADORES*)

ATRIBUTOS

VECTORES

¿CUÁL ES EL COMPORTAMIENTO DE ESTE ATRIBUTO?
RANGO, SOPORTE, MÍNIMO, MÁXIMO, VALOR ESPERADO,
DISPERSIÓN.

$$Z = F(\text{ATRIBUTOS}) \rightarrow \text{DIMRED}$$

$$Z = F(\text{VECTORES}) \rightarrow \text{VQ}$$

DEL RIGOR EN LA CIENCIA

“EN AQUEL IMPERIO, EL ARTE DE LA CARTOGRAFÍA LOGRÓ TAL PERFECCIÓN QUE EL MAPA DE UNA SOLA PROVINCIA OCUPABA TODA UNA CIUDAD, Y EL MAPA DEL IMPERIO, TODA UNA PROVINCIA. CON EL TIEMPO, ESTOS MAPAS DESMESURADOS NO SATISFICIERON Y LOS COLEGIOS DE CARTÓGRAFOS LEVANTARON UN MAPA DEL IMPERIO, QUE TENÍA EL TAMAÑO DEL IMPERIO Y COINCIDÍA PUNTUALMENTE CON ÉL. MENOS ADICTAS AL ESTUDIO DE LA CARTOGRAFÍA, LAS GENERACIONES SIGUIENTES ENTENDIERON QUE ESE DILATADO MAPA ERA INÚTIL Y NO SIN IMPIEDAD LO ENTREGARON A LAS INCLEMENCIAS DEL SOL Y LOS INVIERNOS. EN LOS DESIERTOS DEL OESTE PERDURAN DESPEDAZADAS RUINAS DEL MAPA, HABITADAS POR ANIMALES Y POR MENDIGOS; EN TODO EL PAÍS NO HAY OTRA RELIQUIA DE LAS DISCIPLINAS GEOGRÁFICAS.”

ESPACIOS MULTIDIMENSIONALES

The Strange Geometry of High-Dimensional Spaces (II)

The volume of a high-dimensional ball is concentrated in its crust!

Let us write $B_p(0, r)$ for the p -dimensional ball centered at 0 with radius $r > 0$, and $C_p(r)$ for the “crust” obtained by removing from $B_p(0, r)$ the sub-ball $B_p(0, 0.99r)$. In other words, the “crust” gathers the points in $B_p(0, r)$, which are at a distance less than $0.01r$ from its surface.

In Figure 1.5, we plot as a function of p the ratio of the volume of $C_p(r)$ to the volume of $B_p(0, r)$

$$\frac{\text{volume}(C_p(r))}{\text{volume}(B_p(0, r))} = 1 - 0.99^p,$$

which goes exponentially fast to 1.

UNA FUNCIÓN COMPARA OBJETOS.

DISTANCIA

1. $d(X,Y) \geq 0$ PARA CUALESQUIERA DOS PUNTOS X,Y .
SI $X = Y$, $d(X,X) = 0$.

2. $d(X,Y) = d(Y,X)$
(SIMETRÍA).

3. $d(X,Z) \leq d(X,Y) + d(Y,Z)$.
(LA DISTANCIA ENTRE DOS PUNTOS ES LA *MÍNIMA*).

ESPACIO MÉTRICO: EXISTENCIA DE DISTANCIA Y DE UN CONJUNTO DE
OBJETOS (PUNTOS)

NORMA

$$\mathbf{I} \quad = \sum_{i=1}^n |x_i - y_i|$$

$$\mathbf{2} \quad = \left(\sum_{i=1}^n |x_i - y_i|^2 \right)^{1/2}$$

$$\mathbf{P} \quad = \left(\sum_{i=1}^n |x_i - y_i|^p \right)^{1/p}$$

$$\begin{aligned} \mathbf{INFINITA} \quad &= \lim_{p \rightarrow \infty} \left(\sum_{i=1}^n |x_i - y_i|^p \right)^{1/p} \\ &= \max(|x_1 - y_1|, |x_2 - y_2|, \dots, |x_n - y_n|). \end{aligned}$$

¿CUÁL ES LA DISTANCIA ESPERADA ENTRE UN PUNTO Y LOS DEMÁS?

$$DE_i = (1/N) \sum \text{DIST}(i,j)$$
